IV. STATUS OF AMENDMENTS

The Amendment filed March 10, 2008 (amending claims 1-5), has been entered by the Final Office Action mailed June 13, 2008.

V. SUMMARY OF CLAIMED SUBJECT MATTER

Claim 1 is directed to a method for controlling a crane (e.g., 1; page 3, lines 29-31; para. [0011]). The method includes giving velocity requests as control sequences (e.g., 10) from a crane control system (e.g., 9) to crane drives (e.g., 11, 12; see FIGS. 2 and 3, page 4, lines 16-19; para. [0014]) and reading and storing the velocity requests (V_{ref}) in a control system (e.g., 9) (e.g., FIGS. 2 and 3; page 4, lines 19-20; para. [0014]), whereby

each velocity request (V_{ref}) is compared with the previous velocity request and, if the velocity request is changed, an acceleration sequence for the corresponding velocity change is formed and stored (e.g., see page 4, lines 19-23; para. [0014]), after which, summing the velocity changes defined by the stored acceleration sequences after a particular time interval and adding the obtained sum (dV) to the previous velocity request to achieve a new velocity request (V_{ref2}), which is set as a new control and velocity request for the crane drives (e.g., 11, 12; see page 4, lines 23-28; para. [0014]), and

performing some of the velocity changes defined by summed acceleration sequences at a definition time of each selected sequence on each control step and performing the rest of them as delayed (e.g., see page 4, lines 28-30; para. [0014]),

reading and summing the stored sequence parts to be performed as delayed on a plurality of program rounds (e.g., see page 5, lines 5-13; para. [0015]).

Claim 2 is directed to a method as claimed in claim 1, wherein reading and summing stored sequence parts to be performed as delayed at a time interval which is many times longer than said control step (e.g., see page 4, lines 35-36; page 5, lines 1-2; para. [0015]).

Claim 3 is directed to a method as claimed in claim 1, wherein reading and summation interval of stored sequence parts to be performed can vary (e.g., see page 6, line 9; para. [0019]).

Claim 4 is directed to a method as claimed in claim 1, wherein storing parts of the sequences to be performed as delayed in a two-element table, wherein a velocity change is defined in the first element and time (e.g., T), after which the velocity change or changes to be performed as delayed is/are added to the velocity request, is defined in the second element (e.g., see page 4, lines 35-36; page 5, lines 1-2; para. [0015]).

Claim 5 is directed to a method as claimed in claim 1, wherein restricting the change of velocity actual value so that with respect to the previous change, the change can be, at most, such a velocity change to be calculated with a used control step that equals to set maximum value for acceleration or deceleration at most (e.g., see page 5, lines 14-31; para. [0016]–[0017]).

VI. GROUNDS OF REJECTION TO BE REVIEWED ON APPEAL

The Examiner has finally rejected [i] claims 1-5 under 35 U.S.C. 112, 2nd paragraph for allegedly being indefinite for failing to particularly point out and distinctly claim the subject
